RCRA program and ORC representatives met with Jim Schermbeck and Frisco citizens to discuss Exide Industries. Community concerns focused on waste remaining in the north landfill, the impact of demolition/remediation on air quality, water quality in Stewart Creek, and addressing potential hot-spots of lead contamination outside of the facility.

RCRA program representatives held a call with TCEQ to discuss their concerns regarding lamp crushing and the lack of EPA HQ guidance on how to handle lamp crushing activities conducted under the Universal Waste Rule.

RCRA program representatives contacted TCEQ and Exide Industries to coordinate sampling that EPA will conduct at the Exide Frisco facility next week. Sampling will focus on treated slag material from the north landfill.
